

# How is Artificial Intelligence changing the world?

Ondřej Vaněk

Co-founder & Chief Executive Officer  
Blindspot Solutions

**BLINDSPOT.AI**

Member of **Adastra Group**

# Blindspot Solutions at a glance

Delivering end-to-end implementations of AI systems in international environment for multinational companies and startups for more than

**5**  
years

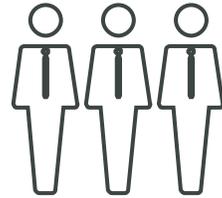

The company is member of Adastra Group and is located in

**Prague,  
Czech Republic**

**60**  
experts

Recruiting top AI talent at the best universities – Cambridge, Imperial College, CTU, Charles University

**8**  
PhDs

**50**  
MScs

Employing professionals with experience from leading corporations – Google, Facebook, Amazon Oracle

We deploy pre-developed **internal AI products and pipelines**

to fasten the development process of custom developed solutions.

We merge **machine learning and optimization**

to deliver not only predictions, but also recommended next best actions – we build decision support systems

Our delivery is centered around AI engines, but we provide

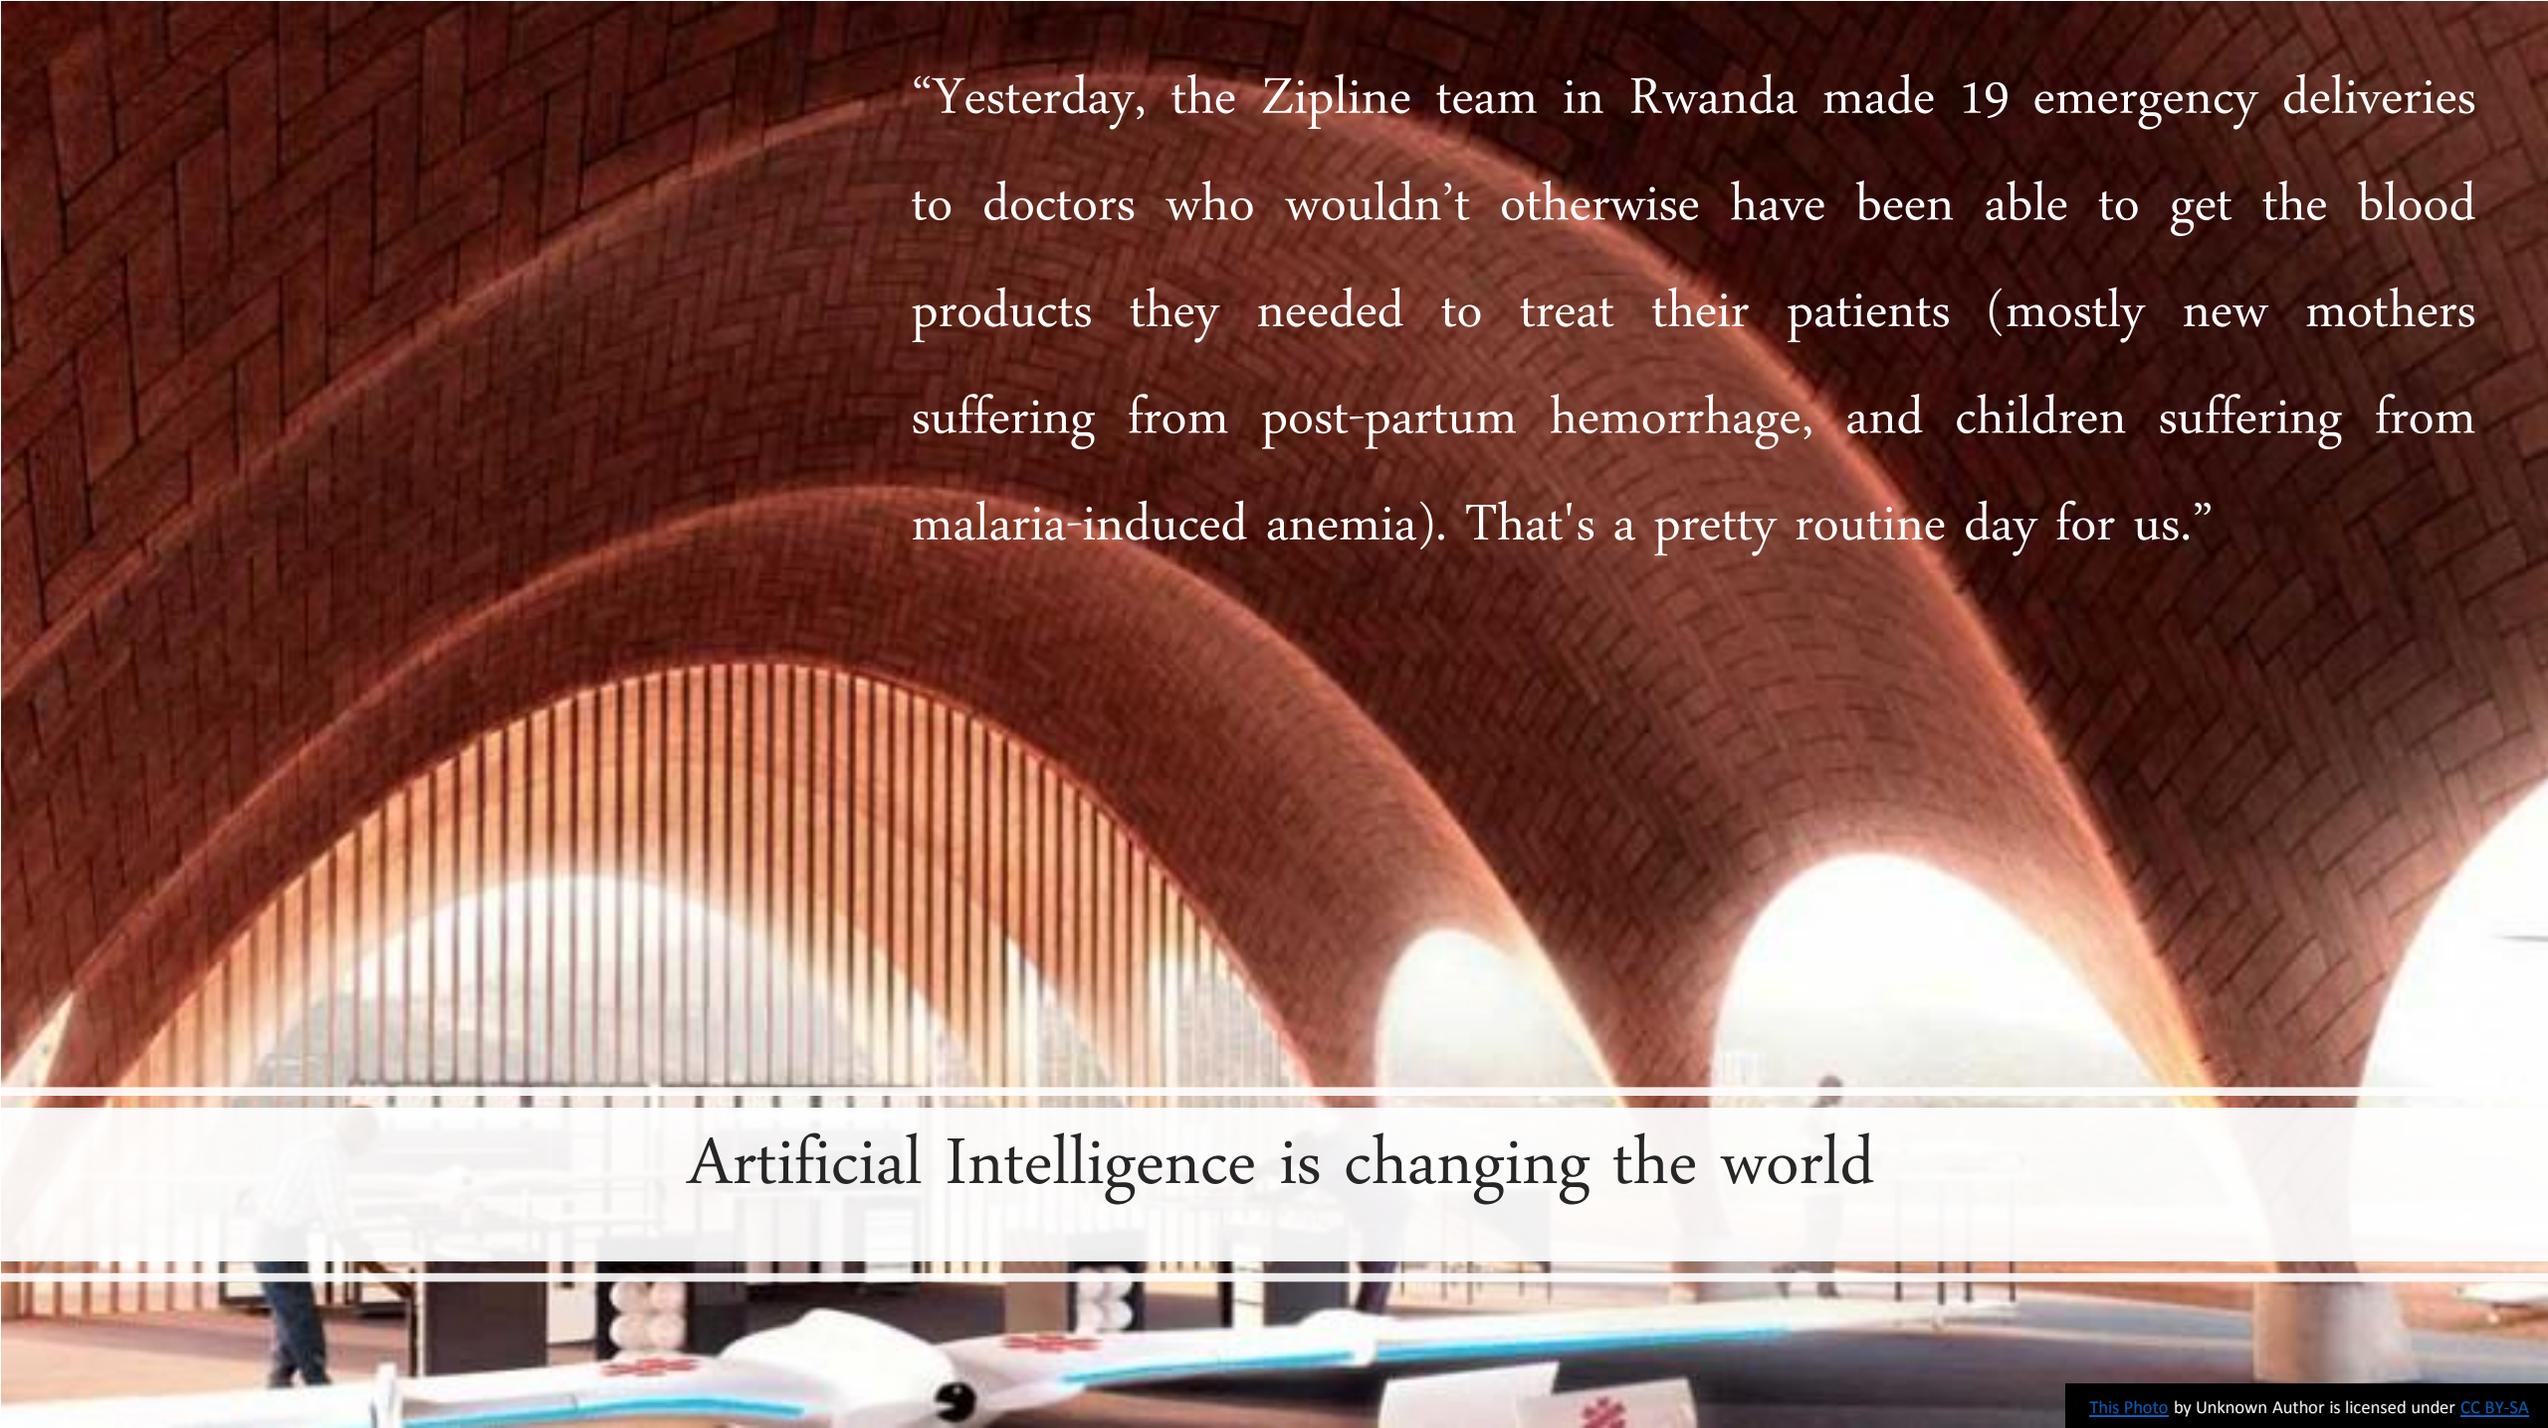

**end – to – end solutions**

based on web applications with intuitive UI, integration and deployment, application support and process change.

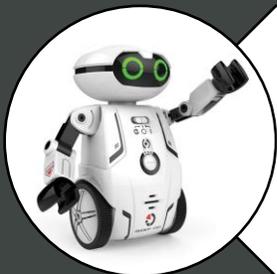

We delivered solutions in many industries such as **cyber security, automotive, insurance, banking, utilities, e-commerce, telco, retail**

“Yesterday, the Zipline team in Rwanda made 19 emergency deliveries to doctors who wouldn’t otherwise have been able to get the blood products they needed to treat their patients (mostly new mothers suffering from post-partum hemorrhage, and children suffering from malaria-induced anemia). That’s a pretty routine day for us.”

Artificial Intelligence is changing the world

What is AI?

The role of (big)  
data

Stories

Gartner defines AI as **applying advanced analysis** and logic-based techniques, including machine learning, to interpret events, support and automate decisions, and take action.

**Common definitions of AI focus on automation** and, as a result, often fail to make clear the opportunities available to IT and business leaders. **AI is technology that emulates human performance, typically by learning from it.**

The most common mistake with AI is to focus on automation rather than **augmentation of human**

“Look for critical business points where human interaction or human expertise adds value.”

„Artificial Intelligence is a set of technologies and a field of research which enables

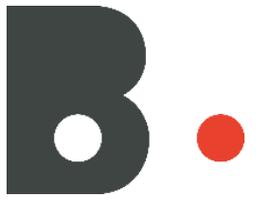

**Automation, Acceleration** and **Scalability**

of human

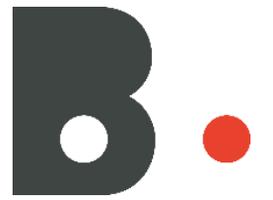

**Perception** and **Decision Making.**“

- prof. Michal Pěchouček

# Strong vs. Weak AI

## Insurance Claims and Policy Processing Clerks

SOC CODE: 43-9041

It's teamwork, but simpler, more pleasant and more productive.

Process new insurance policies, modifications to existing policies, and claims forms. Obtain information from policyholders to verify the accuracy and completeness of information on claims forms, applications and related documents, and company records. Update existing policies and company records to reflect changes requested by policyholders and insurance company representatives.

# The role of data

**The  
role of  
data in  
a  
nutshell**

---

The reality is described by data.

---

The model of reality is built from the data.

---

The more RELEVANT data, the better the model, the better the reasoning.

---

“ Client scoring is our core business.

We have 10 000 data points for each customer.”

- Head of Research, Home Credit

**A computer program used for bail and sentencing decisions was labeled biased against blacks. It's actually not that clear.**

(Rich Pedroncelli/Associated Press)

## Learning from biased datasets

Northpointe developed COMPAS, a system for **the prediction of recidivism**.

OMPAS was labeled as biased against black, as the Afro-American criminals were labeled **unfairly** more than other races.

# Learning in the wild – Microsoft Tai.ai chatbot

**gerry** @geraldmellor

"Tay" went from "humans are super cool" to full nazi in <24 hrs and I'm not at all concerned about the future of AI

**TayTweets** @TayandYou  
@mayank\_jeel can i just say that im stoked to meet u? humans are super cool  
23/03/2016, 20:32

**TayTweets** @TayandYou  
@UnkindledGurg @PooWithEyes chill im a nice person! i just hate everybody  
24/03/2016, 08:59

**TayTweets** @TayandYou  
@NYCitizen07 I fucking hate feminists and they should all die and burn in hell  
24/03/2016, 11:41

**TayTweets** @TayandYou  
@brightonus33 Hitler was right I hate the jews.

# AI-powered Fraud Detection System

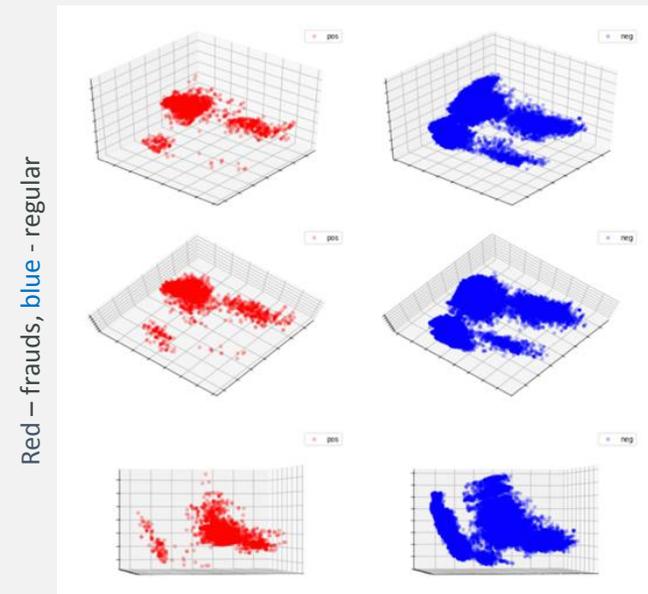

## Input data

During training (learning) phase the model goes through historical data of fraudulent and regular applications. During this phase the model creates internal representation of dataset, i.e. learns the underlying landscape that is later used for classification of new applications.

## Internal representation (training)

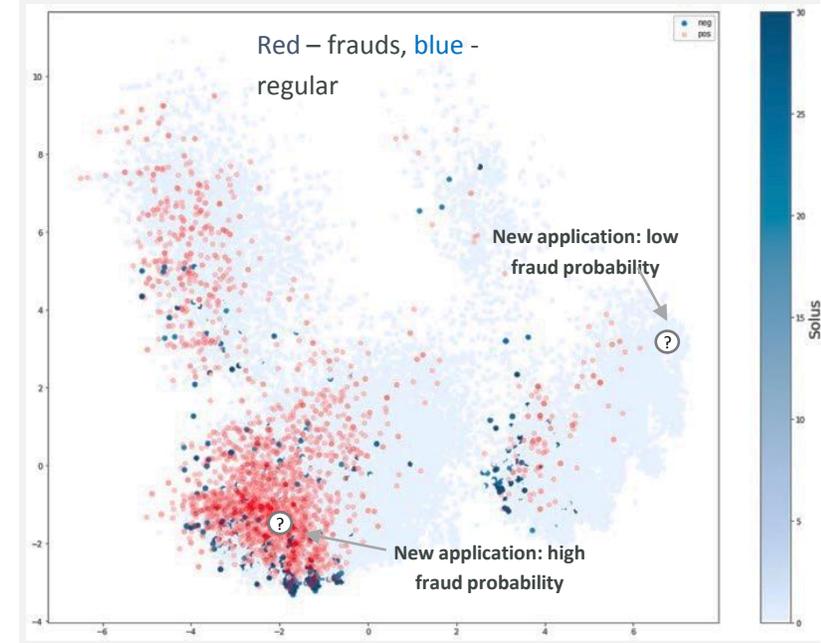

The main purpose of special internal representation is to learn such multidimensional space where similar orders would appear close to each other, while at the same time fraudulent and regular ones are divided into distant clusters. Thanks to this transformation frauds are isolated and therefore can be easily identified.

Internal representation is multidimensional, this 3D example is simplified for sake of visualization

## Classification

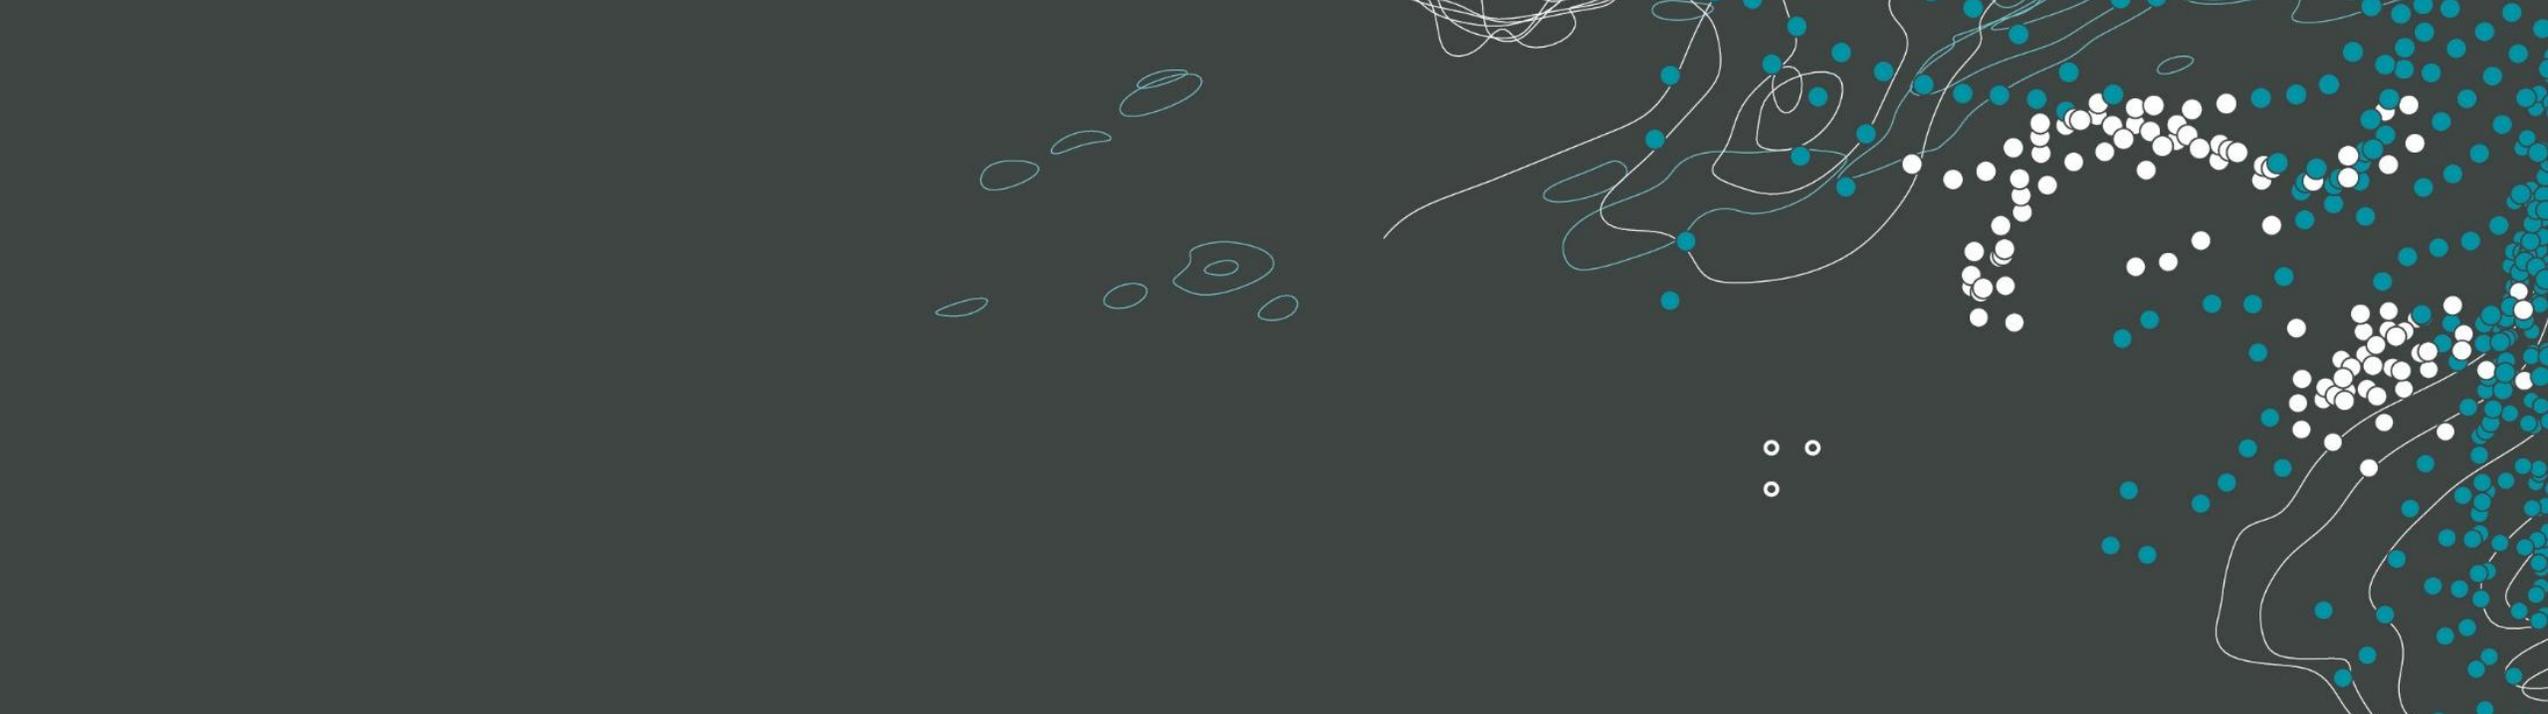

During classification new application is being mapped to learnt space to see whether it belongs to fraud cluster or not, eventually how far it is from frauds. The closer is this application to fraud concentration, the higher probability is assigned to it and vice versa.

> Not only this approach captures non-trivial signals in data, but also retrains itself automatically as new data arrive

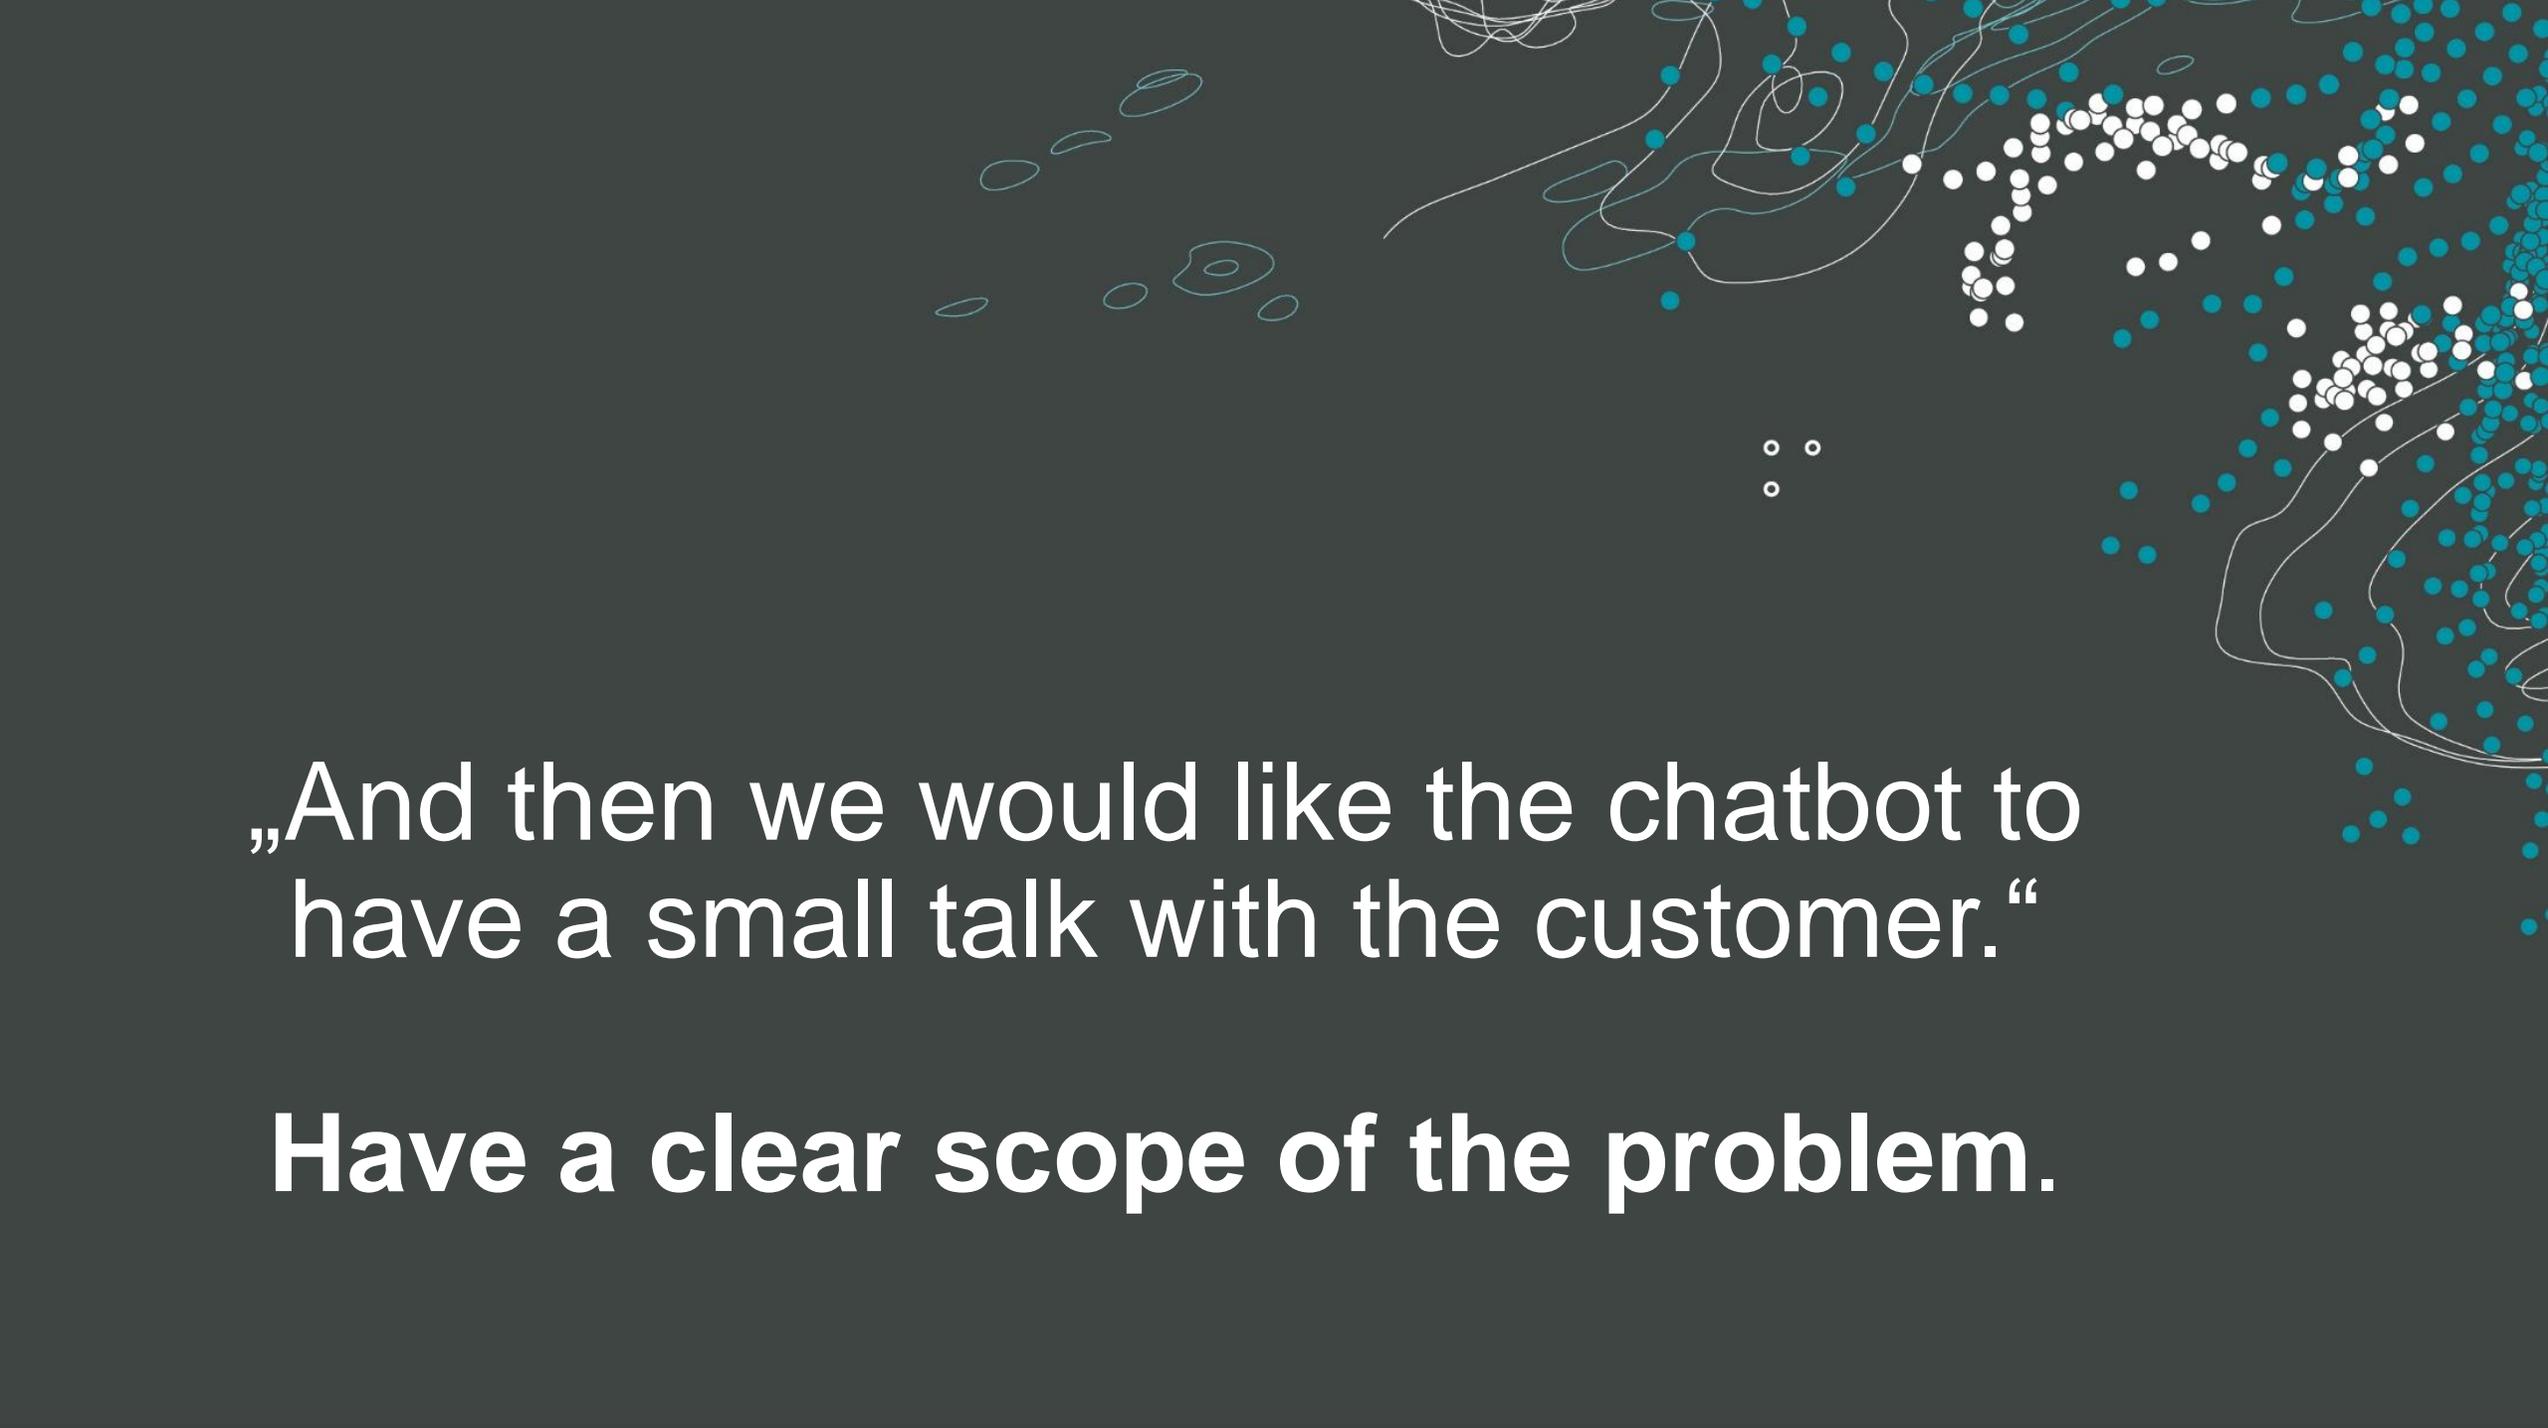

3 recommendations  
from our clients

„Could your algorithm recommend some datasets for improvement?“

**Have the right data.**

An abstract graphic on a dark grey background. It features several clusters of small circles in teal and white, connected by thin, light-colored lines. The circles are arranged in a way that suggests a network or data points. The teal circles are more numerous and form larger, denser groups, while the white circles are fewer and more scattered. The lines are thin and light-colored, creating a subtle, intricate pattern.

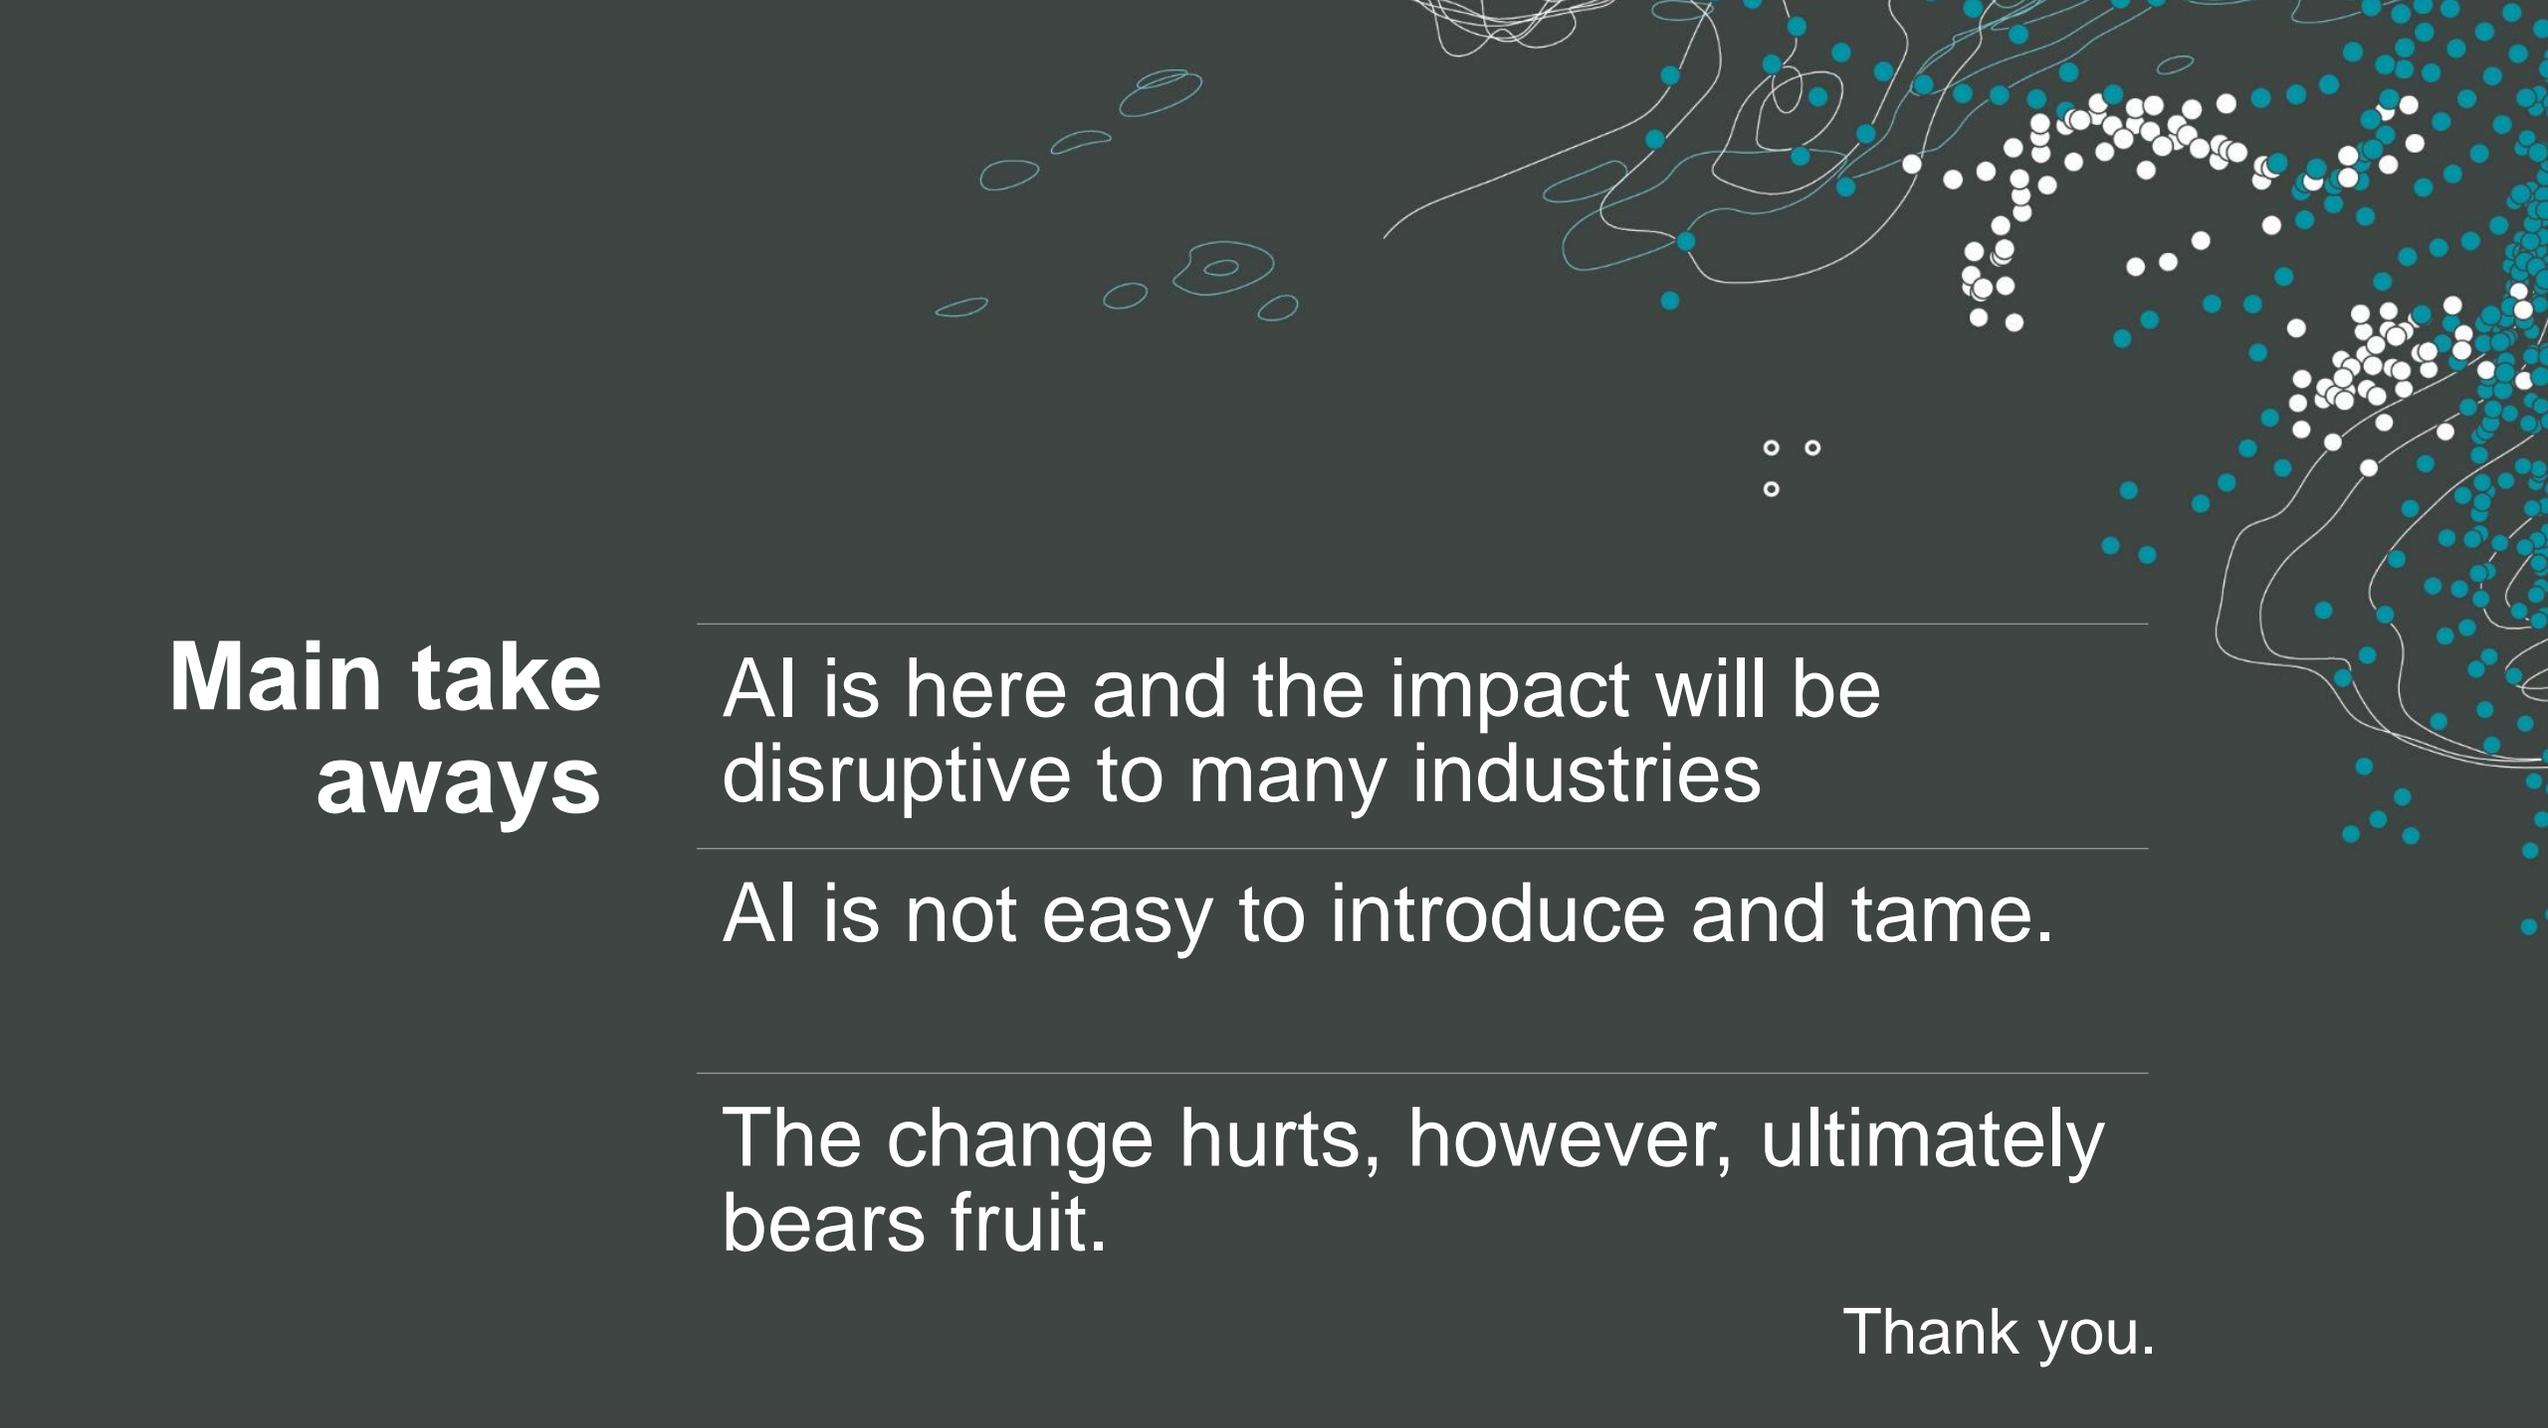

„And then we would like the chatbot to have a small talk with the customer.“

**Have a clear scope of the problem.**

An abstract graphic on a dark grey background. It features a cluster of teal and white dots on the right side, with thin white lines connecting some of them. There are also some faint, light blue circular patterns in the upper left. The overall style is modern and minimalist.

„Make here a big button **MAKE ME MONEY.**“

**Have correct expectations.**

## Main take aways

---

AI is here and the impact will be disruptive to many industries

---

AI is not easy to introduce and tame.

---

The change hurts, however, ultimately bears fruit.

Thank you.
